

To Whom It May Concern,

I am officially filing my opposition to LightSquared's application for bandwidth due to my concern for the affect it is going to have on the GPS industry.

I've been following the news stories on the LightSquared technology and I am befuddled at how it appears that this extremely damaging technology to a vital component of our infrastructure is continuing on pace for approval. GPS has proven to be extremely helpful and useful for so many industries that I can not fathom why we would allow anyone to undermine this technology. Please review the website located at <http://www.saveourgps.org/> and do what you can to stop this impending tragedy.

Sincerely,

Brett A Phipps
